

## WHAT IS A "CORONAVIRUS"?

According to the World Health Organization, a coronavirus is a type of virus that is transmitted from animals to humans. When a new strain first infects humans, it is known as a "novel coronavirus." Other famous illnesses caused by coronaviruses include Severe Acute Respiratory Syndrome (SARS) and Middle East Respiratory Syndrome (MERS). COVID-19, first discovered in 2019, is a novel coronavirus.

## HOW IS THE FLU DIFFERENT?

Both COVID-19 and the flu cause similar symptoms, but the flu is caused by different strains of influenza viruses, whereas COVID-19 is caused be a single virus. The biggest difference between the two seems to be that COVID-19 may be able to be transmitted through cold air, even after the ill person is no longer near. The flu, on the other hand, typically requires closer contact, through a sneeze or talking.

# **COMMON SYMPTOMS**

### COVID-19 INFI UFNZA

- J Fever
- J Chills J Cough
- / Sore Throat
- J Runny/Stuffy Nose
- / Muscle/Body Aches J Headaches
- √ Fatigue
- J Vomiting/
- J Diarrhea

# NUMBER OF ILLNESSES\* COVID-19 INFLUENZA

THOUSAND BILLION

Globally. About 35 million in the United United States States alone.

\*Between October 1, 2019 and March 1, 2020

COVID-19 INFLUENZA

3,977

291,000 -646,000

DEATH RATE BY FACTOR\*

COVID-19 AGE

\*Numbers come from the WHO-China Joint Mission, published on Feb. 28, 2020, Deaths appear to come largely from elderly and people with pre-existing medical conditions.

PRE-EXISTING

CONDITION

\*Globally between October 1, 2019 and March 1, 2020. Influenza estimate is a global average each year

While scientists are racing to learn more about this novel coronavirus. most indications are that the flu

continues to be a far greater threat than COVID-19. Still, COVID-19 does appear to have a higher death rate overall and it is recommended to avoid making yourself vulnerable to the disease. It appears that the best way to stay safe from COVID-19 is to wash hands with soap and warm water regularly, limit contact with infected persons, and cough into crook of your elbow to decrease risk of transmission.
